

High Frquency Induction jointing hammer

United Induction Heating Machine Limited

We are experienced in Induction Heating,induction heating machine,Induction Heating equipment.They are widely used in induction heating service, induction heat treatment, induction brazing, induction hardening,induction welding, induction forging,induction quenching,induction soldering induction melting and induction surface treatment applications

Induction jointing is a form of jointing that uses electromagnetic induction to heat the workpiece.

The jointing apparatus contains an induction coil that is energised with a high-frequency electric current.

Induction jointing is used for long production runs and is a highly automated process, usually used for jointing the seams of pipes. It can be a very fast process, as a lot of power can be transferred to a localised area, so the faying surfaces melt very quickly and can be pressed together to form a continuous rolling joint.
